Anodizing Leader Introduces Sustainability Initiatives Geared to Aid the Environment and Customers

Anomatic Corporation invests in new technology, practices and procedures to improve green products, overall.

Newark, OHIO – Anomatic Corporation announces the completion of a comprehensive sustainability plan — designed to reduce energy, waste, water and air pollution while significantly increasing the company's ability to recycle and reuse materials. The company embarked on the initiatives in early 2008 in response to customers' needs to produce products to meet stringent consumer demand. The latest sustainability initiatives were designed to work in concert with the company's current and ongoing practices, implemented prior to the new initiatives.

As part of the overall plant and equipment improvements, Anomatic Corporation has significantly improved its ability to deliver environmentally-friendly packaging. Major landmarks include the following:

- Up to 40% of process water is recycled and reused via Advanced Recycling Technologies → reducing demand for potable water throughout Anomatic's processes
- New closed cycle vapor technology cleaning system to be installed September 2009, reduces 92% of carbon based energy for equivalent cleaning of raw parts prior to anodizing & recovers 80% – 90% of stamping oil for reuse
- Upgraded Waste Water Treatment System to "Semi-Intelligent" PLC Logic-based control – lowering chemical usage by improving operation and automated control
- Current Air Scrubber technology removes more than 98% of Nitrogen Oxides, operating at less than 40% of EPA Permits

"Anomatic is committed to being a socially responsible partner – striving for sustainable development by optimizing current technologies and ongoing research and development," offers Mark A. Ormiston, Anomatic's Director of Research & Development.

About Anomatic Corporation

Anomatic is a global leader in high volume anodized components, consistently delivering innovation, unprecedented quality, the greatest selection and unsurpassed consistency for the cosmetic, beauty and health care, pharmaceutical, spirits industries and more. This dedication to quality is why over 100 companies internationally have partnered with Anomatic to give their products a unique and distinctive advantage through anodizing, metal stamping, decorating and assembly. www.Anomatic.com
